

VeriTrac™

VeriTrac™ is a comprehensive biometric solution for physical access applications. It is biometric agnostic - can be deployed using any combination of available biometrics (facial recognition, fingerprint, or palm geometry) to:

- Control/monitor access to physical locations
- Verify authorized users
- Record access logs
- Raise alerts of attempted entry by unauthorized individuals

VeriTrac™ is fully BioAPI compliant and multi-modal.

VeriTrac™ can be customized to set clearances for specific users, restricting access to certain locations on a per person basis. This gives administrators control over who enters a given area and when such access is permitted. Security tolerances can be adjusted to coincide with the sensitivity of the area.

Benefits

- Create a safer environment by preventing unauthorized individuals from entering restricted areas
- Augment capabilities of existing security operations
- Augment existing card based or numeric keypad systems by using a biometric
- Eliminate the need for additional employees to monitor restricted areas
- Reduce fraudulent attendance activity by hourly employees
- Deter “tail-gaiting”

Features

- Use any available biometric to control access to doors/gates.
- Deployed in conjunction with PIN or ID card system
- Integrates readily with existing PIN/ID card system
- Customize clearance for individual users
- Create detailed and accurate attendance or access logs
- Alert security personnel of attempted unauthorized use
